## 1. Introduction

This document was prepared following Medway Council's request to examine the impacts of the Local Plan upon the slip road merges and diverges for the five following junctions (as shown in Figure 1):

- M2 Junction 1;
- M2 Junction 2;
- M2 Junction 3;
- M2 Junction 4;
- M2 Junction 5;
- M20 Junction 4;
- M20 Junction 5.

Figure 1 - Junctions' location

The merge and diverge assessments present in this document were carried out in accordance with the diagrams in Design Manual for Road and Bridges – CD 122 Geometric design of grade separated junctions.

The assessments compare the peak hour flows for the AM and PM merges/diverges with M2 and M20 mainline flows. Using the 2041 refined Reference Case (rRC), including the completed and committed developments between 2019 and 2041 and the 2041 final Do Something (fDS) which includes the additional growth associated with the local plan developments.

For the merge assessment, the upstream mainline flows were used and for the diverge assessment, the downstream mainline flows were used. An increase in provision may be required when forecast traffic

## M2 Merge and Diverge Assessment

volumes exceed the capacity of the current or proposed layout, potentially leading to congestion or safety concerns. However, the focus of this merge and diverge assessment would only consider mitigation if there was a layout change between the rRC and the fDS provision.

Figure 2 to Figure 8 show the location of each junction's merge/diverge.

Figure 8 - M20 Junction 5

## 2. M2 Junction 1

### (1) M2 EASTBOUND: DIVERGE

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	2853	1970
B	Base_PM	4433	2568
C	Ref Case LTC_AM	3364	2574
D	Ref Case LTC_PM	5366	3440
E	DS LTC_AM	3492	2847
F	DS LTC_PM	5274	3946

Scenario	Diverge Layouts	
	AM	PM
Current Layout	D2	
Base	D	D
Ref Case LTC	E	E
Do Something LTC	E	n/a

**Notes:**

- The M2J1 EB diverge (off-slip) is currently type D2 layout.
- As an increase in provision is required in the rRC, the maximum required provision (type E) does not change between rRC and the fDS. The maximum provision (two-lane drop) is already required at the reference case.

(2) M2 EASTBOUND: MERGE

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	2853	960
B	Base_PM	4433	888
C	Ref Case LTC_AM	3364	1045
D	Ref Case LTC_PM	5366	942
E	DS LTC_AM	3492	1351
F	DS LTC_PM	5274	1287

Scenario	Merge Layouts	
	AM	PM
Current Layout	D	
Base	D	B
Ref Case LTC	D	D
Do Something LTC	E	D

**Notes:**

- The M2J1 EB merge (on-slip) is currently type D layout.
- By the fDS, an increase is required from type D to a type E\*.

**Current scenario:**

CD122 - Figure 3.14e Layout D - lane

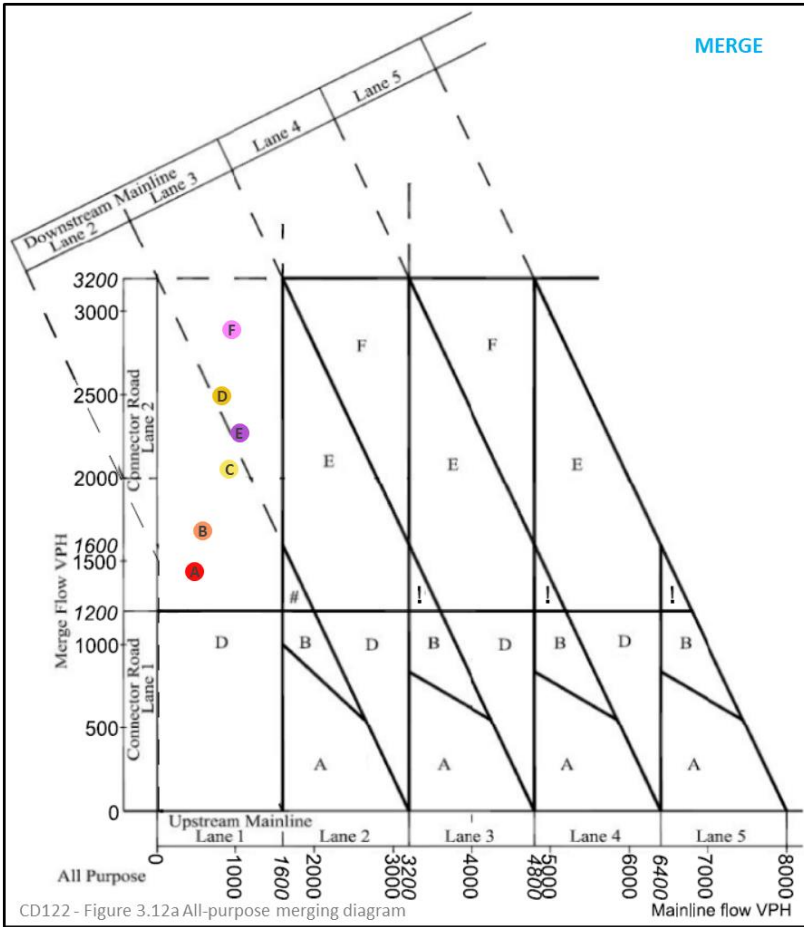

**Reference Case and DS (with LTC)**

CD122 - Figure 3.14g Layout E Option 1 - lane gain with ghost island offside merge

\*The proposed mitigation can be found in Section 0.

(3) A289 NORTHBOUND: MERGE

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	462	1417
B	Base_PM	564	1661
C	Ref Case LTC_AM	897	2031
D	Ref Case LTC_PM	809	2467
E	DS LTC_AM	1031	2248
F	DS LTC_PM	930	2863

Scenario	Merge Layouts	
	AM	PM
Current Layout	B	
Base	n/a	n/a
Ref Case LTC	n/a	n/a
Do Something LTC	n/a	n/a

**Notes:**

- The A289 NB merge (on-slip) is currently type B layout.
- This is a complex merging situation where merging flow is higher than mainline flow. It is recommended that an E type layout would be more suitable here, but this is not due to the local plan scenarios as there is no change in provision likely to be required from the reference case.

**(4) M2 WESTBOUND: DIVERGE**

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	3768	462
B	Base_PM	3538	564
C	Ref Case LTC_AM	4965	897
D	Ref Case LTC_PM	3685	809
E	DS LTC_AM	4998	1031
F	DS LTC_PM	3795	930

Scenario	Diverge Layouts	
	AM	PM
Current Layout	C	
Base	A	C
Ref Case LTC	C	A
Do Something LTC	C	A

**Notes:**

- The M2J1 WB diverge (off-slip) is currently type C layout.
- All scenarios modelled show no increase required to level of provision.

(5) M2 WESTBOUND: MERGE

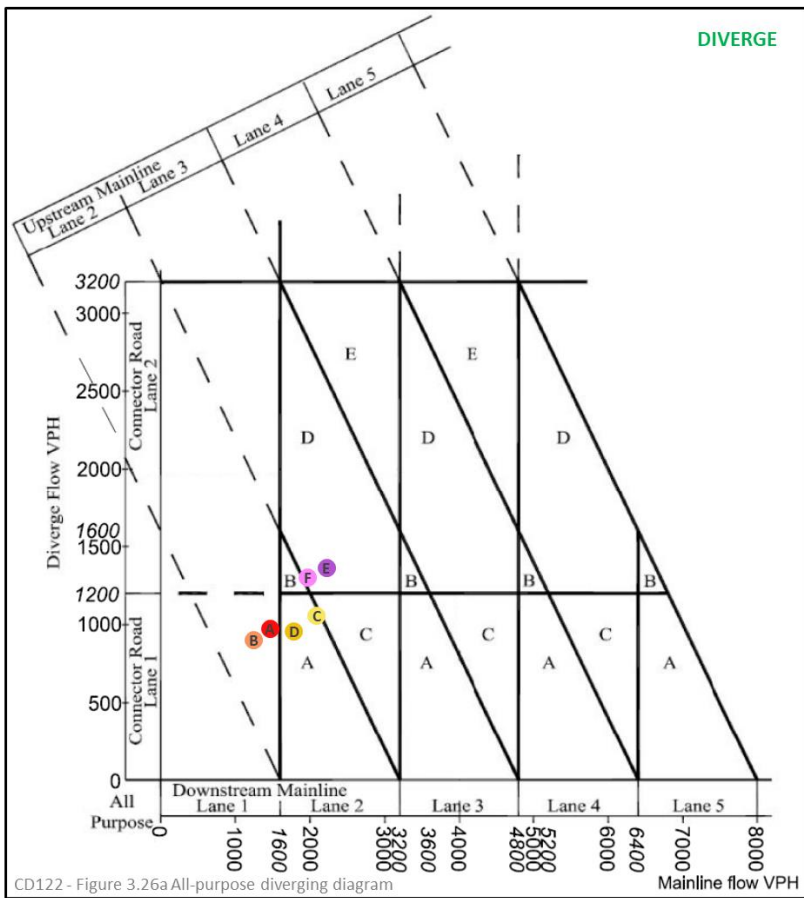

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	3768	2190
B	Base_PM	3538	1771
C	Ref Case LTC_AM	4965	2919
D	Ref Case LTC_PM	3685	2341
E	DS LTC_AM	4998	3095
F	DS LTC_PM	3795	2460

Scenario	Merge Layouts	
	AM	PM
Current Layout	F	
Base	E	E
Ref Case LTC	F	E
Do Something LTC	F	E

**Notes:**

- The M2J1 WB merge (on-slip) is currently type F layout.
- All scenarios modelled show no increase required to level of provision.

(6) A289 SOUTHBOUND: DIVERGE

CD122 - Figure 3.26a All-purpose diverging diagram

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	1443	960
B	Base_PM	1226	888
C	Ref Case LTC_AM	2069	1045
D	Ref Case LTC_PM	1767	942
E	DS LTC_AM	2203	1351
F	DS LTC_PM	1954	1287

Scenario	Diverge Layouts	
	AM	PM
Current Layout	A1	
Base	n/a	n/a
Ref Case LTC	D	B
Do Something LTC	D	D

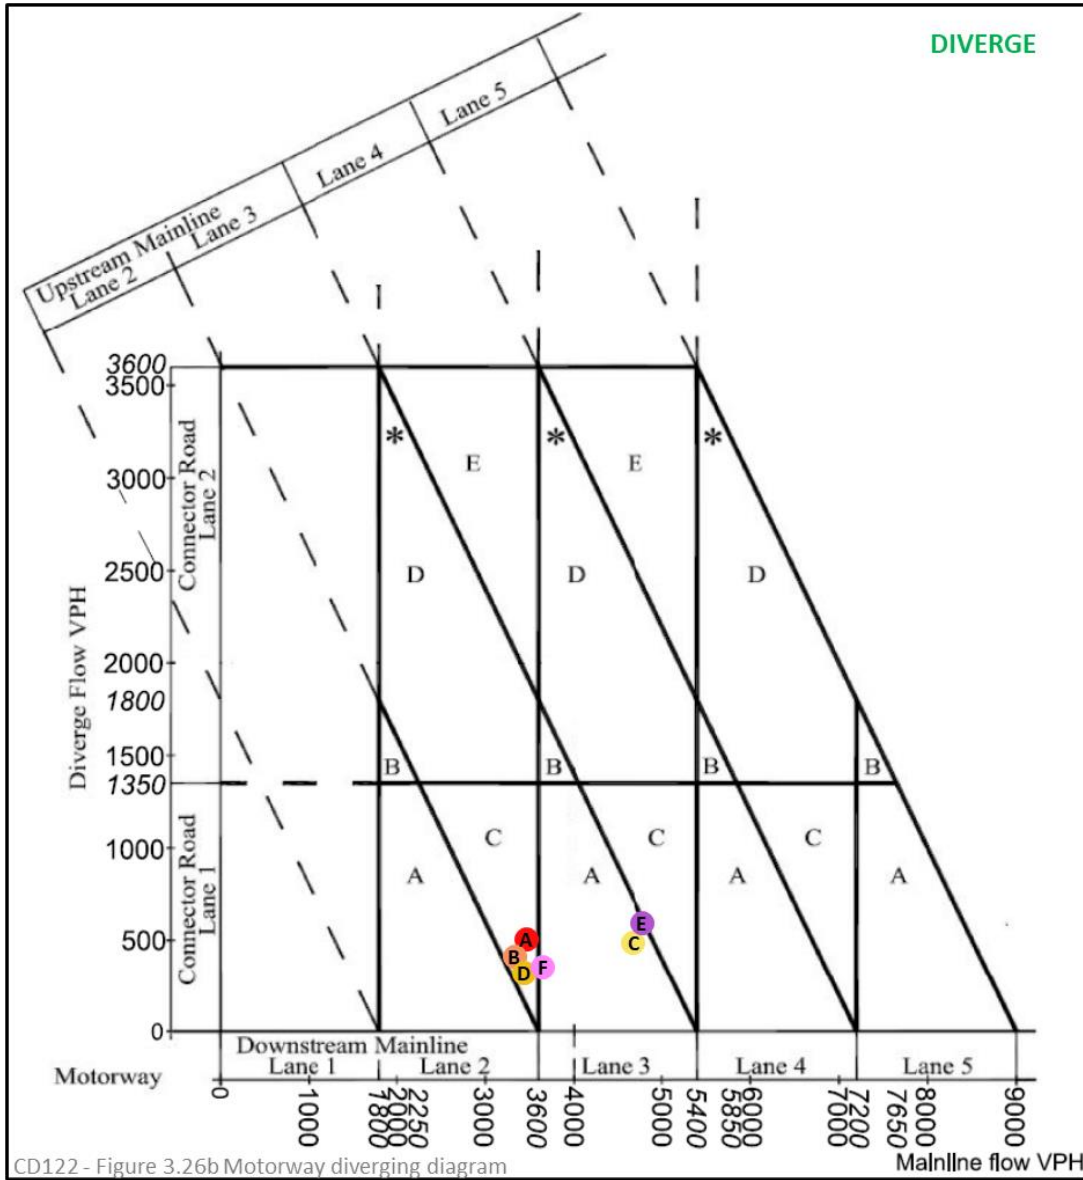

**Notes:**

- The A289 SB diverge (off-slip) is currently type A1 layout.
- By the fDS, an increase is required from type A to a type D\*.

\*The proposed mitigation can be found in Section 7.

### 3. M2 Junction 2

(1) M2 NORTHBOUND: DIVERGE

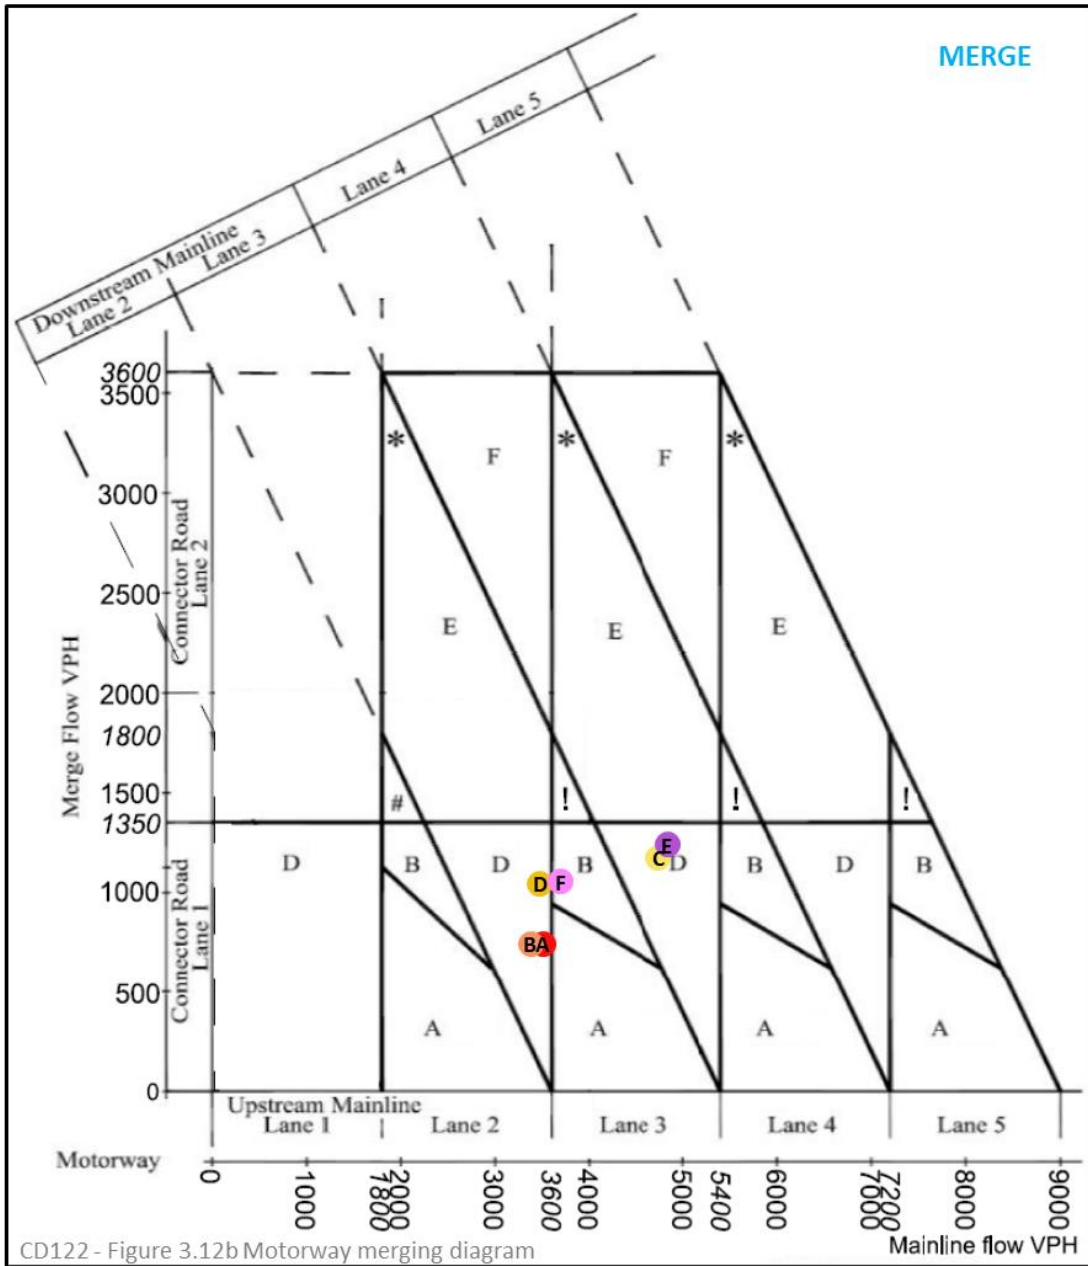

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	3503	467
B	Base_PM	3372	374
C	Ref Case LTC_AM	4709	448
D	Ref Case LTC_PM	3471	284
E	DS LTC_AM	4811	554
F	DS LTC_PM	3690	317

Scenario	Diverge Layouts	
	AM	PM
Current Layout	C	
Base	C	C
Ref Case LTC	A	C
Do Something LTC	A	A

**Notes:**

- The M2 J2 NB diverge (off-slip) is currently type C layout.
- All scenarios modelled show no increase required to level of provision.
- Therefore, the local plan would not require mitigation at this diverge.

(2) M2 NORTHBOUND: MERGE

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	3503	727
B	Base_PM	3372	729
C	Ref Case LTC_AM	4709	1153
D	Ref Case LTC_PM	3471	1023
E	DS LTC_AM	4811	1218
F	DS LTC_PM	3690	1035

Scenario	Merge Layouts	
	AM	PM
Current Layout	D	
Base	D	D
Ref Case LTC	D	D
Do Something LTC	D	B

**Notes:**

- The M2 J2 NB merge (on-slip) is currently type D layout.
- All scenarios modelled show no increase required to level of provision.
- Therefore, the local plan would not require mitigation at this merge.

(3) M2 SOUTHBOUND: DIVERGE

CD122 - Figure 3.26b Motorway diverging diagram

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	3157	656
B	Base_PM	4613	708
C	Ref Case LTC_AM	3617	791
D	Ref Case LTC_PM	5255	1053
E	DS LTC_AM	3835	999
F	DS LTC_PM	5398	1162

Scenario	Diverge Layouts	
	AM	PM
Current Layout	C	
Base	C	A
Ref Case LTC	A	C
Do Something LTC	A	C

**Notes:**

- The M2 J2 SB diverge (off-slip) is currently type C layout.
- All scenarios modelled show no increase required to level of provision.
- Therefore, the local plan would not require mitigation at this diverge.

(4) M2 SOUTHBOUND: MERGE

CD122 - Figure 3.12b Motorway merging diagram

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	3157	403
B	Base_PM	4613	409
C	Ref Case LTC_AM	3617	290
D	Ref Case LTC_PM	5255	359
E	DS LTC_AM	3835	325
F	DS LTC_PM	5398	411

Scenario	Merge Layouts	
	AM	PM
Current Layout	D	
Base	A	A
Ref Case LTC	A	D
Do Something LTC	A	D

**Notes:**

- The M2 J2 SB merge (on-slip) is currently type D layout.
- All scenarios modelled show no increase required to level of provision.
- Therefore, the local plan would not require mitigation at this merge.

## 4. M2 Junction 3

### (1) M2 NORTHBOUND: DIVERGE

CD122 - Figure 3.26b Motorway diverging diagram

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	2303	1105
B	Base_PM	1758	817
C	Ref Case LTC_AM	3267	1418
D	Ref Case LTC_PM	2062	890
E	DS LTC_AM	3173	946
F	DS LTC_PM	2098	848

Scenario	Diverge Layouts	
	AM	PM
Current Layout	B2	
Base	A	N/A
Ref Case LTC	D	A
Do Something LTC	C	A

**Notes:**

- The M2 J3 NB diverge (off-slip) is currently type B2 layout.
- An increase in provision is required in the rRC from the Current Layout. However, the maximum required provision (type D) does not change between rRC and the fDS.
- Therefore, the local plan would not require mitigation at this diverge.

(2) M2 NORTHBOUND: MERGE

CD122 - Figure 3.12b Motorway merging diagram

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	2303	1667
B	Base_PM	1758	1987
C	Ref Case LTC_AM	3267	1890
D	Ref Case LTC_PM	2062	1694
E	DS LTC_AM	3173	2193
F	DS LTC_PM	2098	1909

Scenario	Merge Layouts	
	AM	PM
Current Layout	E2	
Base	E	N/A
Ref Case LTC	E	E
Do Something LTC	E	E

**Notes:**

- The M2 J3 NB merge (on-slip) is currently type E2 layout.
- All scenarios modelled show no increase required to level of provision.

(3) M2 SOUTHBOUND: DIVERGE

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	1576	1983
B	Base_PM	2519	2503
C	Ref Case LTC_AM	1479	1693
D	Ref Case LTC_PM	2396	1880
E	DS LTC_AM	1361	2016
F	DS LTC_PM	2483	1837

Scenario	Diverge Layouts	
	AM	PM
Current Layout	D2	
Base	N/A	D
Ref Case LTC	N/A	D
Do Something LTC	N/A	D

**Notes:**

- The M2 J3 SB diverge (off-slip) is currently type D2 layout.
- All scenarios modelled show no increase required to level of provision.
- Therefore, the local plan would not require mitigation at this diverge.

(4) M2 SOUTHBOUND: MERGE

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	1576	1030
B	Base_PM	2519	1467
C	Ref Case LTC_AM	1479	711
D	Ref Case LTC_PM	2396	978
E	DS LTC_AM	1361	643
F	DS LTC_PM	2483	938

Scenario	Merge Layouts	
	AM	PM
Current Layout	E2	
Base	D	E
Ref Case LTC	D	B
Do Something LTC	D	B

**Notes:**

- The M2 J3 SB merge (on-slip) is currently type E2 layout.
- All scenarios modelled show no increase required to level of provision.
- Therefore, the local plan would not require mitigation at this merge.

## 5. M2 Junction 4

### (1) M2 EASTBOUND: DIVERGE

Scenario	Description	Downstream Mainline	Diverge Flow
A	Base_AM	1726	881
B	Base_PM	2609	1377
C	Ref Case LTC_AM	1560	630
D	Ref Case LTC_PM	2425	950

	AM	PM
Current Layout	A2	
Base	C	A
Ref Case LTC	A	C
Do Something LTC	A	C

**Notes:**

- The M20 J5 EB diverge (off-slip) is currently type A2 layout.
- An increase in provision is required in the rRC from the Current Layout. However, the maximum required provision (type C) does not change between rRC and fDS.
- Therefore, the local plan would not require mitigation at this diverge.

(2) M20 WESTBOUND: MERGE (E)

Scenario	Description	Upstream Mainline	Merge Flow	Merge Layouts		
				AM	PM	
A	Base_AM	3903	1037			
B	Base_PM	2899	730			
C	Ref Case LTC_AM	4907	1205			
D	Ref Case LTC_PM	3532	781			
E	DS LTC_AM	4818	1257			
F	DS LTC_PM	3495	811			
				Current Layout	B	
				Base	B	D
				Ref Case LTC	D	D
				Do Something LTC	D	D

**Notes:**

- The M20 J5 WB (E) merge (on-slip) is currently type B layout.
- An increase in provision is required in the rRC from the Current Layout. However, the maximum required provision (type D) does not change between rRC and fDS.
- Therefore, the local plan would not require mitigation at this merge.

(3) M20 WESTBOUND: MERGE (W)

Scenario	Description	Upstream Mainline	Merge Flow
A	Base_AM	3139	592
B	Base_PM	4762	640
C	Ref Case LTC_AM	3775	812
D	Ref Case LTC_PM	6428	741
E	DS LTC_AM	3727	782
F	DS LTC_PM	6590	732

Scenario	Merge Layouts	
	AM	PM
Current Layout	B	
Base	D	D
Ref Case LTC	A	D
Do Something LTC	A	D

**Notes:**

- The M20 J5 WB (W) merge (on-slip) is currently type B layout.
- An increase in provision is required in the rRC from the Current Layout. However, the maximum required provision (type D) does not change between rRC and fDS.
- Therefore, the local plan would not require mitigation at this merge.

## 10. Summary

Most of the merges and diverges tested show no additional requirement as a result of the local plan Do Something Scenario. One merge and one diverge have been shown to require an increase in provision:

**A289 Diverge SB.** The diverge layout is type A for rRC and type D for fDS scenarios, an increase in provision is required (lane gain).

**The M2 Eastbound Merge.** The merge layout is type D for rRC and type E for fDS scenarios, an increase in provision is required (lane gain).

Stantec have provided a design drawing to Medway which shows a layout which appears to satisfy DMRB and National Highways requirements. A design, cost and safety review has been undertaken on the proposed Eastbound merge mitigation. It is recommended that this report is read in conjunction with the following reports for the further analysis on the proposed mitigation in this location:

- B2432000 – Medway LP, M2J1, Cost Estimate Report
- B243200 – Medway LP, M2J1, Design Review
- B243200 – Medway LP, M2J1, Safety Review

## **Appendix A. Stantec Mitigation at M2 J1**

CD 122 Clause E/1.7.2 says 'near straight lengths should be as close as practicable to the requirements for existing motorways'.

CD 122 Section 5.8  
Near straight  
Existing Departure from Standard - there is not a near straight after the nose.  
Departure from Standard

CD 122 table 3.21  
Minimum nose ratio  
Existing Departure from Standard - the existing nose ratio is relaxed to 1:13.  
Relaxation

CD 122 clause E/3.3 allows parameters to be relaxed at existing motorways.

The existing nose remains as per the existing layout.

CD 127 Figure 2.1.1N1f  
Connector road width 9.3 m is for a DG2E connector road. This is a relaxation from MG2E.  
Relaxation

CD 122 clause E/1.3 allows parameters to be relaxed at existing motorways.

The improvements to the connector road start after the start of the existing nose.

A weaving assessment is not currently undertaken for these improvements.

This may not be required as the 'exit datum point' is not changing.

CD 109 Section 2.13  
Stopping sight distance  
The existing stopping sight distance is below 295 m. Forward visibility may be as low as 270 m on the approach to the diverge.  
Departures from Standard

The drawing shows the stopping sight distance where it is shortest for simplicity. This is where the existing bend is tightest.

CD 122 Section 5.14  
Stopping sight distance  
Existing Departure from Standard - the existing vegetation reduces visibility to potentially 51 m. This is below 160 m required for a 85 kph design speed.  
Departure from Standard

The existing lane markings start here. The proposed lane markings tie into these.

Historic aerial imagery indicates in 2003 this area was clear. The Stopping Sight Distance may have been around 220 m.

Currently this area has mature shrubs and small trees potentially > 2 m in height. These obstructions reduce the Stopping Sight Distance to around 65 m in the existing conditions.

In the proposed conditions the second lane is added by widening the carriageway on the inside. The Stopping Sight Distance may be 51 m in the proposed state without vegetation clearance.

Vegetation clearance is likely required to achieve suitable visibility. This will remove the safety risk and so Departure from Standard.

The existing carriageway is potentially 9.3 m wide.

Widening the carriageway to 10 m allows for a 9.3 m width as per DG2E to CD 127. It also allows for a 0.7 m additional width for bend widening as per CD 122 clause 2.18. This proposed width is a relaxation to have a hard strip instead of a hard shoulder.

Widening the carriageway on the inside of the bend potentially involves less earthworks. There is potentially man-made soil deposits on the outside. This may be excavated soil from the previous junction improvement works.

A risk assessment is required to determine if the resulting forward visibility is justified by widening on the inside.

**General Notes**

- This drawing shall be read in conjunction with all other relevant documentation.
- Do not scale from this drawing.
- All dimensions are in metres unless specified otherwise.
- The information on this drawing is based on limited OS information.
- The dimensions shown are assumed and require verifying through surveys.
- This drawing shows a potential option(s) from an initial feasibility design. The potential option(s) is indicatively shown for information only. These are subject to outline and detailed design. Further changes may be required.
- The constraints and potential departures from standard shown/listed are not exhaustive. More may become apparent through further investigations, surveys and during the detailed design.

**Notes**

CD 122 Clause E/1.7.2 says 'near straight lengths should be as close as practicable to the requirements for existing motorways'.

CD 122 Section 5.8  
Near straight  
Existing Departure from Standard - there is not a near straight after the nose.  
Departure from Standard

CD 122 table 3.21  
Minimum nose ratio  
Existing Departure from Standard - the existing nose ratio is relaxed to 1:13.  
Relaxation

CD 122 clause E/3.3 allows parameters to be relaxed at existing motorways.

A weaving assessment is not currently undertaken for these improvements.

This may not be required as the 'exit datum point' is not changing.

The existing nose remains as per the existing layout.

CD 127 Figure 2.1.1N1f  
Connector road width 9.3 m is for a DG2E connector road. This is a relaxation from MG2E.  
Relaxation

CD 122 clause E/1.3 allows parameters to be relaxed at existing motorways.

The proposed improvements beyond the end of the existing nose are the same as shown on drawing 332610920-STN-HGN-XX-DR-CH-0001.

Moving the existing gantry (and VRS) is a potential way to improve visibility. This may also involve altering the existing cutting slope. This would affect the existing trees and vegetation.

CD 109 Section 2.13  
Stopping sight distance  
There is an existing departure from standard. The existing stopping sight distance may be as low as 270 m (< 295 m) on the approach to the diverge. In the proposed scheme the stopping sight distance may be as low as 241 m.  
Departures from Standard

The drawing shows the stopping sight distance where it is shortest for simplicity. This is where the existing bend is tightest.

CD 122 Section 5.14  
Stopping sight distance  
Existing Departure from Standard - the existing vegetation reduces visibility to potentially 51 m. This is below 160 m required for a 85 kph design speed.  
Departure from Standard

The existing lane markings start here. The proposed lane markings tie into these.

Historic aerial imagery indicates in 2003 this area was clear. The Stopping Sight Distance may have been around 220 m.

Currently this area has mature shrubs and small trees potentially > 2 m in height. These obstructions reduce the Stopping Sight Distance to around 65 m in the existing conditions.

In the proposed conditions the second lane is added by widening the carriageway on the inside. The Stopping Sight Distance may be 51 m in the proposed state without vegetation clearance.

Vegetation clearance is likely required to achieve suitable visibility. This will remove the safety risk and so Departure from Standard.

The existing carriageway is potentially 9.3 m wide.

Widening the carriageway to 10 m allows for a 9.3 m width as per DG2E to CD 127. It also allows for a 0.7 m additional width for bend widening as per CD 122 clause 2.18. This proposed width is a relaxation to have a hard strip instead of a hard shoulder.

Widening the carriageway on the inside of the bend potentially involves less earthworks. There is potentially man-made soil deposits on the outside. This may be excavated soil from the previous junction improvement works.

A risk assessment is required to determine if the resulting forward visibility is justified by widening on the inside.

**Layout D Option 2:**  
The drawing shows a potential arrangement for a proposed Layout D Option 2 - auxiliary lane drop diverge. The existing arrangement is a Layout C Option 1 diverge. The proposals also include extending the length of two lanes on the connector road to include the loop.

There are existing geometric departures from standard and related relaxations. This layout may however be acceptable following full consideration of these.

**Layout E Option 1:**  
The current drawing shows a potential arrangement for a proposed Layout E Option 1 merge. The existing arrangement is a Layout D merge.

There are significant geometric departures from standard and related relaxations to avoid affecting the existing 'Watling Street' interchange link bridge.

The layout is not likely to be acceptable due to the potential safety risks resulting from the existing space constraints.

**Layout E Option 2:**  
At the 6.7 m 'pinch' point, a Layout E Option 2 requires space for two lanes. A compliant layout requires 9.2 m (two 3.65m lane widths + 1.2 m ghost island width + 1.0 m hard strip width).

This layout is therefore not possible without widening the M2 carriageway here. Refer to the drawing 332610920-STN-HGN-XX-DR-CH-0004 for details of a Layout E Option 2 with realigning the M2.
